Door & Drawer Front Lookup

Integrity Cabinets has created a way for you to easily look up door and drawer front sizes for the majority of our cabinetry. As of today, we have given you the ability to look up any full overlay or half overlay door and/or drawer front size(s). We are working on the Elite Series (Inset) doors and drawer fronts so that will be a little bit before we add them to this spreadsheet.

It is a macros driven Microsoft Excel-based spreadsheet just like our Quick Quote program. Make sure you enable the macros or you won't be able to use this as a resource tool.

1. First step is to enter the door style in the yellow cell (Line 20). Once that is entered in the line below, the overlay of that door is identified.
2. Below that is where you will enter the cabinet item (Line 24) to identify door size/drawer front.

To clear the Item Number in cell A24, right click the mouse and select "CLEAR CONTENTS."

NOTE:

- The Elite Series is NOT included at this time.
- Any pie cut cabinet such as the OBLS or PCB, will need to contact Customer Service for particulars.
